

Strategy V – (EMA + P-SAR)

1. Basis of the Strategy

- Tendency of the price to continue moving up once a fast Moving Average (MA) crosses *above* a slow MA, and to continue going down when a fast MA crosses *below* a slow MA.
- Tendency of the price to continue upwards once the P-SAR dot appears *below* the price bar, and to continue downwards when the P-SAR dot appears *above* the price bar.
- The power of this simple strategy lies in the fact that when the fast 3-period EMA crosses the slow 13-period EMA, and the P-SAR dot also appears *appropriately* at about the same time, the price moves appreciably in the same direction.

2. Requirements and Limitations

- Currency – Any pair, including those with moderately large spreads. Pip yield is usually large when caught early.
- Time frame – 15 mins and above.
- Not suitable during periods of increased volatility.
- Also not suitable during periods of consolidation.
- Trade the trend. That is, float with the prevailing trend.

3. Setup

- Fast EMA (period = 3, price = close), Slow EMA (period = 13, price = close)
- Parabolic SAR (step = 0.02, maximum = 0.2)

4. How to Use the Strategy

BUY when:

- F-EMA crosses *above* S-EMA.

- P-SAR dot appears *below* the price bar.

SELL when:

- F-EMA crosses *below* S-EMA.
- P-SAR dot appears *above* the price bar.

5. Take-Profit Strategies

- BUY order – Set an appropriate take-profit or exit when the P-SAR dot re-appears *above* the price bar, or when the F-EMA re-crosses *below* the S-EMA, or price bar closes *below* the S-EMA.
- SELL order – Set an appropriate take-profit or exit when the P-SAR dot re-appears *below* the price bar, or when the F-EMA re-crosses *above* the S-EMA, or price bar closes *above* the S-EMA.

6. Stop-loss Strategies

Set an appropriate stop-loss. Remember though that any stop-loss of less than 50 pips may not be realistic as your stops may be taken out in a few retracement ticks before the big profitable move forward.

. Exit Strategies

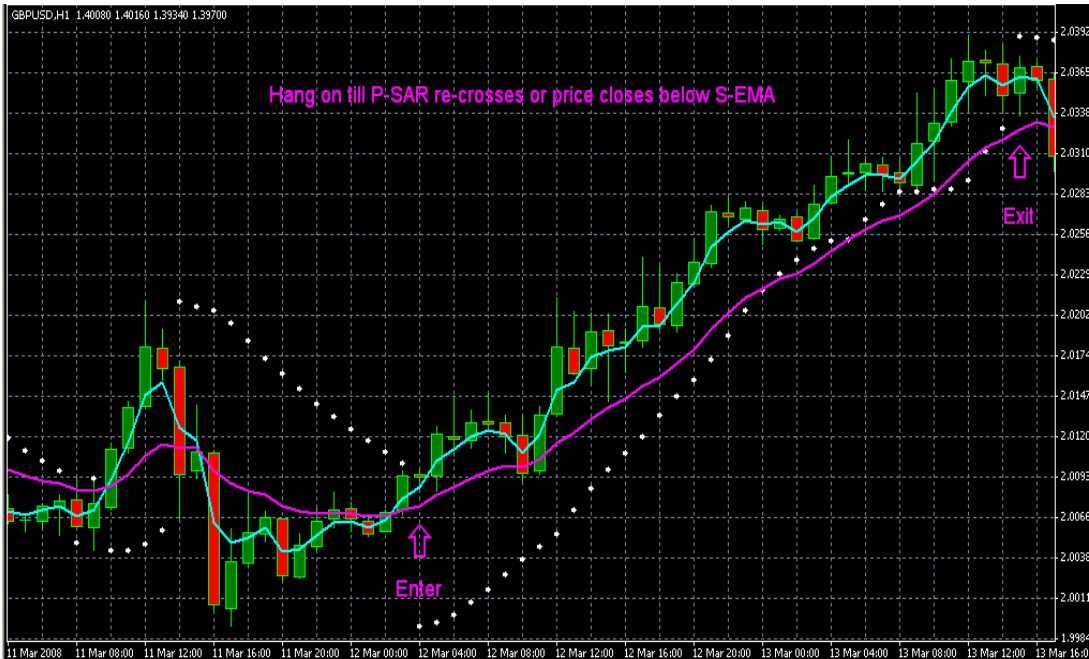

Manually exit your position if one of these conditions occurs:

- The F-EMA re-crosses the S-EMA.
- The P-SAR dot re-appears on the other side of the price bar.

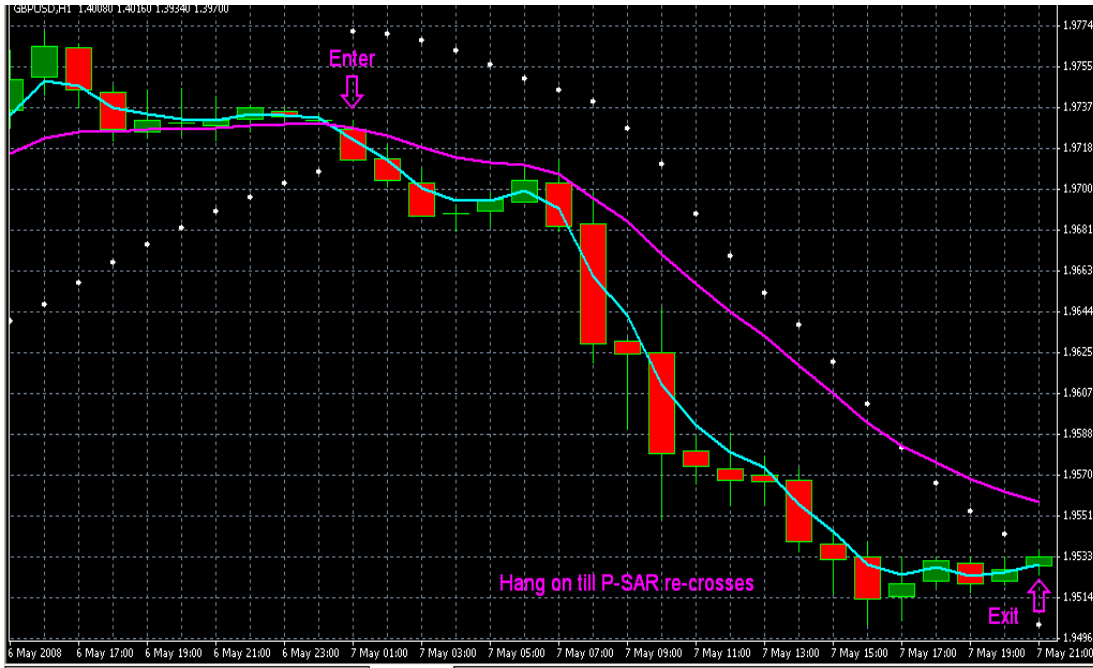

8. Sample Signals in Action

SEE NEXT PAGES.

- Bullish signals

- Bearish signals
